# Web Assignment

**Topics Covered:** HTML, CSS and JS
**Assignment:**
As a developer, you are required to develop a website for LTI which will contain the following pages:

- Home page
- Registration page
- Login page

The base files for this assignment have been shared along with this document:

You need to edit **main.css** and **main.js** files primarily for completing this assignment.

First you need to edit the main.css file to produce the following output for the 3 pages:

**Home Page**

**Login Page**

# Welcome to LTI

Home    Register    Login

LTI

## Login to a world of opportunities!

**Username**

Enter Username

**Password**

Login

☑ Remember me

Cancel          Forgot password?

**Registration Page**

# Welcome to LTI

Home    Register    Login

LTI

## Register to explore amazing career opportunities

**Username**

Enter Username

**Password**

Enter Password

**Email Address**

Enter Email Address

**City**

Enter City

**Mobile No.**

Enter Mobile Number

Register

LTI
Let's Solve

Next you need to edit **main.js** file to write validation code for login and registration page.
Perform common validations like:
- Pattern check (for ex: email address should contain '@' and '.')
- Length check (for ex: username should contain atleast 5 characters)

*Use various JavaScript functions and regex to perform common validations*
